HyWindships

How to Combine Hydrogen and Wind Propulsion to Achieve Absolute Zero Emissions in Trans-Oceanic Shipping

16 September 2025 | IMO, London
Part of London International Shipping Week (LISW)

The ZESTAs ShipZERO programme unites maritime and energy industry experts to deploy **Absolute Zero Emissions Ecosystems NOW**. This work is essential for meeting IMO and UNFCCC climate targets and ensuring ocean health. Ocean health is the greatest regulator of our climate - a healthy ocean balances our climate, while an unhealthy ocean destroys it. Participants don't just connect, they act. They exchange proven solutions and deploy zero-emission technology in real-world operations.

Join the 5th workshop in ZESTAs' ShipZERO series.

ZESTAs ShipZERO30 workshop, "HyWindships" brings together the coalition making absolute zero emissions happen: shipowners deploying solutions today, hydrogen producers scaling supply chains, wind propulsion leaders, cargo owners demanding clean transport, investors backing deployment, and policymakers enabling immediate action.

We're creating absolute zero emissions by working together across the full supply chain – "Wind and Wave to Wake"

The technology exists. The solutions are proven. The time is now.

We're taking this reality to the heart of maritime decision-making at **London International Shipping Week**, with a one-day summit at the **IMO on 16 September 2025**.

This event showcases absolute zero emissions solutions that are deployed, scalable, and ready for global uptake. This isn't about the future, it's about making change happen now.

For further details on the ShipZERO Workshop Series and what has been achieved so far, please visit our website: www.zestas.org/shipzero-workshop-series

By sponsoring, you will:

- Lead the absolute zero ecosystem
- Deploy high-impact projects with decision-makers
- Shape shipping's new reality with industry pioneers
- Accelerate deployment of proven vessels, infrastructure, and supply chains
- Drive shipping to exceed EU and IMO regulations, meeting UNFCCC targets today
- Be part of protecting ocean health through hydrogen - the only fuel that creates no negative environmental impacts on ocean health
