

Kickstarting Zero-Emission Vessels

ShipZERO28

11 September 2023

Our Vision

The Shipowners' Challenges

01

A Global Problem

Air Pollution

Just a handful of ships on our oceans today produce more pollution than all the cars in the world.

**1 Billion
Tonnes**

of greenhouse gases are emitted each year by an industry that thrives on heavy fuel-oil.

Health Risks

International shipping is a hard-to-abate sector. It accounts for around 3% of annual global GHG emissions (one billion tonnes).

400,000
Premature deaths

+

14 million cases
of childhood asthma yearly

The Shipowner's Perspective

External pressures are mounting

International Maritime Organization (IMO)

- Net-zero “by or around 2050” (MEPC 80 GHG strategy)

CoZEV Agreement

- Cargo owners pledge to be net-zero by 2040 (including Amazon, Ikea, Unilever)

Poseidon Principles

- Private banks and ship insurance companies taking steps for responsible financing and insurance of ships

Lack of infrastructure for clean fuels

Ship-owners are increasingly under pressure to make the transition to clean fuels. However, without the necessary infrastructure in place, this transition cannot happen.

The Shipowner's Concerns in the Race to Zero

Fear of being left behind

Bans, taxes & cancel culture

Backing the wrong fuel

Buying dud technology

Paying too much money

Failing to execute

Delivering no impact

Reinventing Infrastructure

Holistic approach to sustainability is a must

By embracing the UN Sustainable Development Goals (SDGs) as a complete framework, this helps us to contribute towards all goals collectively without compromise.

Thank You
